## Java Backend Developer

+91 9663076023 | mailtoprabhat72@gmail.com | Bengaluru, India | [Portfolio](#) | [LinkedIn](#)

### PROFESSIONAL SUMMARY

Java Backend Developer with 3+ years of experience building and maintaining REST APIs using Spring Boot and MySQL. Strong focus on debugging real production issues, optimizing SQL queries, and improving data access performance using indexing and better query design. Hands-on experience deploying and running backend services on AWS (EC2, RDS, S3). Comfortable working on backend systems where reliability, performance, and clean API design are critical.

### TECHNICAL SKILLS

- **Programming Languages:** Java, SQL
- **Frameworks:** Spring, Spring Boot
- **ORM & Persistence:** Hibernate, JPA
- **Web & API:** REST APIs, API Design, Swagger (OpenAPI)
- **Databases:** MySQL (query optimization, indexing), MongoDB
- **Caching:** Redis (basic usage)
- **Cloud:** AWS (EC2, RDS, S3)
- **Architecture:** MVC, Layered Architecture, Microservices
- **Tools:** Git, GitHub, Docker, Postman, JIRA
- **Development:** IntelliJ IDEA, Eclipse, VS Code, Agile/Scrum

### WORK EXPERIENCE

#### Java Software Developer, Full-time

Jan 2023 – Jan 2026

##### Netcore Cloud (Onsite)

Leveraged Java, Spring Boot, Hibernate, API, AWS, MySQL, and SQL, to contribute to core product development in a high-growth environment.

- Developed and maintained REST APIs using Spring Boot and Hibernate for a production system handling real user traffic.
- Worked on MySQL-heavy features — wrote custom queries, optimized slow endpoints, and improved data retrieval using indexing and pagination.
- Debugged Hibernate-related performance issues (including N+1 queries) and improved fetch strategies based on query patterns.
- Implemented JWT-based authentication and role-based access control using Spring Security.
- Used Redis for basic caching to reduce repeated database reads in frequently accessed APIs.
- Deployed and tested services on AWS (EC2, RDS, S3), handled configuration issues, and monitored application behavior using logs.
- Used Swagger for API documentation and Postman for testing, debugging request/response issues, and validating fixes.
- Worked with frontend and QA teams to debug integration issues and resolve production bugs under tight timelines.
- Familiar with microservices concepts including API Gateway, service discovery (Eureka), inter-service communication, and database-per-service pattern.
- Understanding of synchronous vs asynchronous communication and basic concepts of load balancing and distributed systems.
- Aware of fault tolerance patterns and monitoring/logging practices used in production systems.

#### Project: Real Estate Listing & Blog Management System

##### Role & Responsibilities:

- Worked as backend developer for the blog module within a team of 8 engineers.
- Designed and implemented REST APIs for creating, updating, and managing blog posts and user interactions.
- Built MySQL schema for blogs, comments, and user actions with proper relationships and indexing.
- Implemented pagination and filtering for listing APIs to handle large datasets efficiently.
- Applied Spring Security + JWT for secure API access and role-based control.
- Used Redis caching in selected endpoints to reduce repeated database calls.
- Documented APIs using Swagger and tested/debugged endpoints using Postman.
- **Technologies:** Java, Spring Boot, Hibernate, MySQL, Redis, REST APIs, Swagger, Maven, Postman

### EDUCATION

#### BE in Computer Science & Engineering

Visvesvaraya Technological University (CGPA: 7.2)

2019 – 2023

Bengaluru, India

### CERTIFICATIONS

- J.P. Morgan Software Engineering Virtual Internship (Oct '25)
- AWS Solutions Architecture Virtual Internship
